

ChArUco Calibration Board

18x24 squares | 30mm each | 540x720mm total | ANY subset of pages works

WHY ChArUco?

Each black square contains a unique ID number printed in it (an ArUco marker).

OpenCV reads the ID and knows EXACTLY where that square is on the global grid,

even if the rest of the board is not printed. Print 2 sheets or 9 — all work.

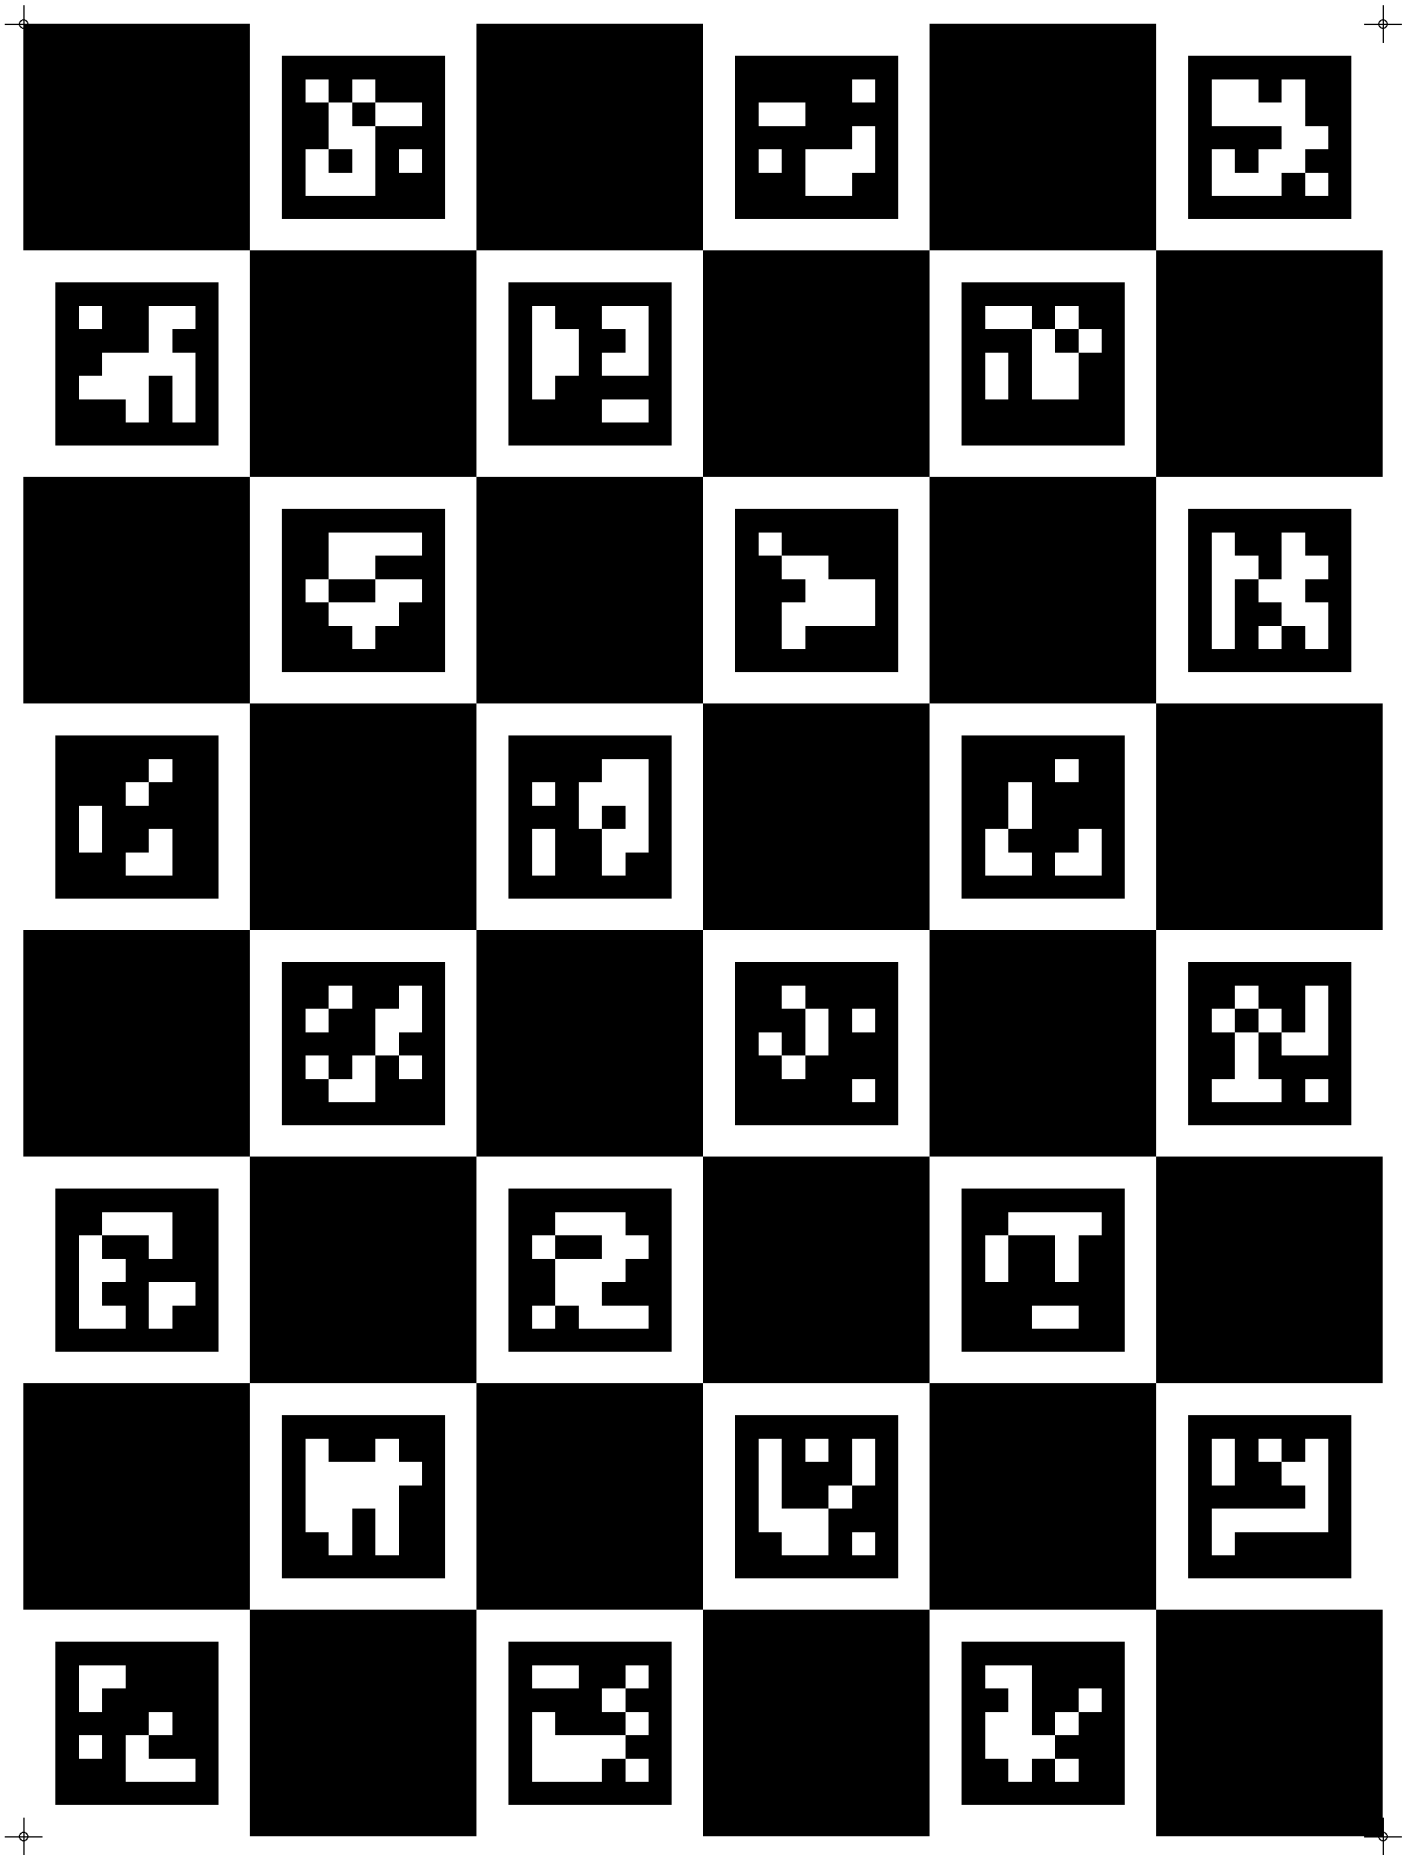

1 PRINT

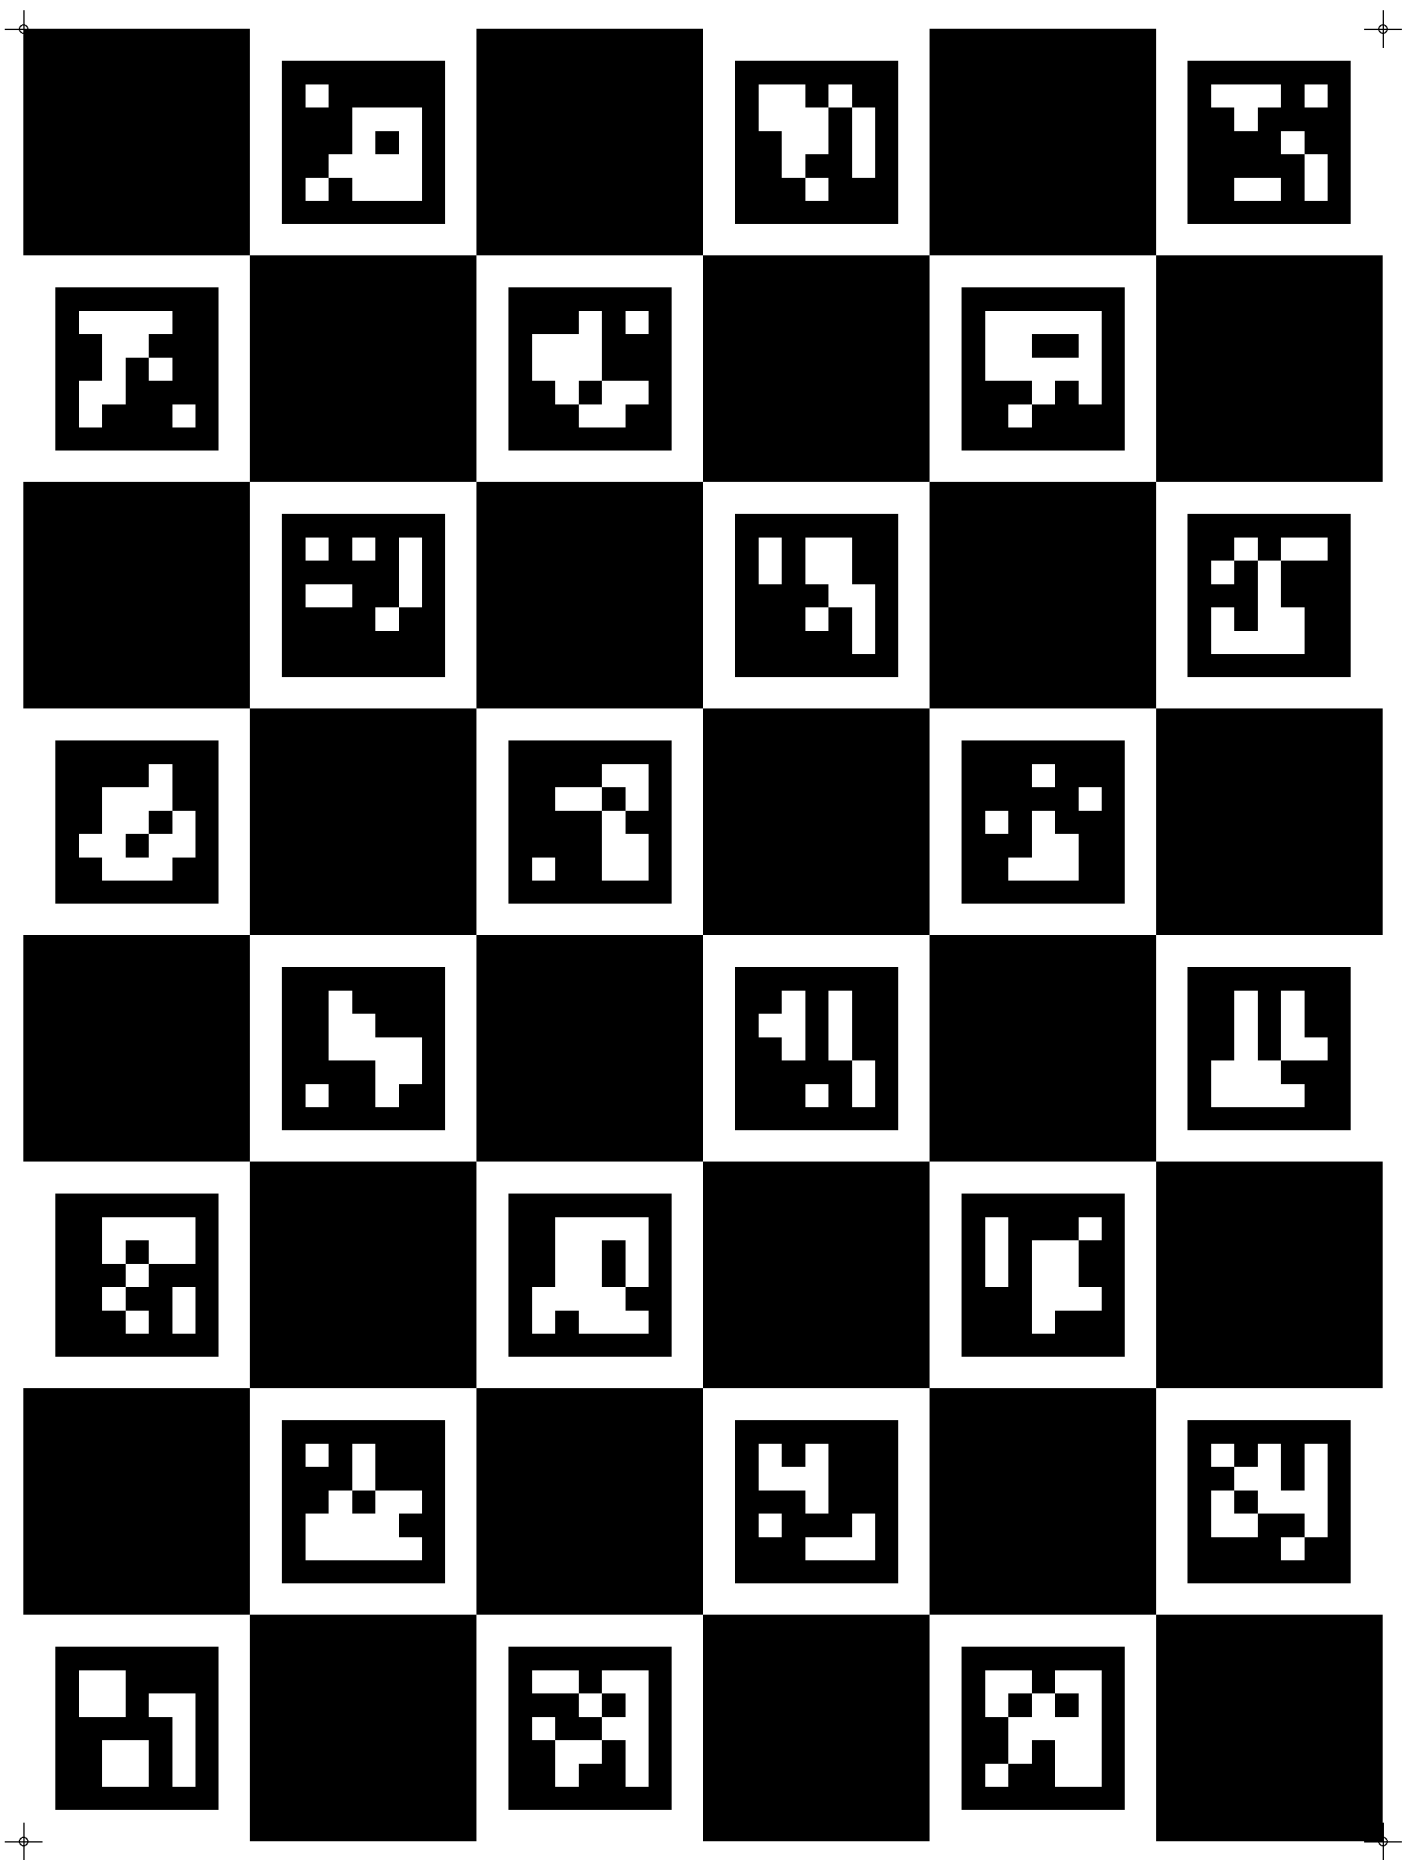

- Send calibration_board.pdf to your Brother MFC-L2710DW
- Print only the pages you need (see layout diagram below)
- CRITICAL: Scale = 100% (never 'fit to page' or 'shrink')
- Paper: US Letter Toner saver: OFF Quality: Best / Fine
- Two-sided printing: OFF

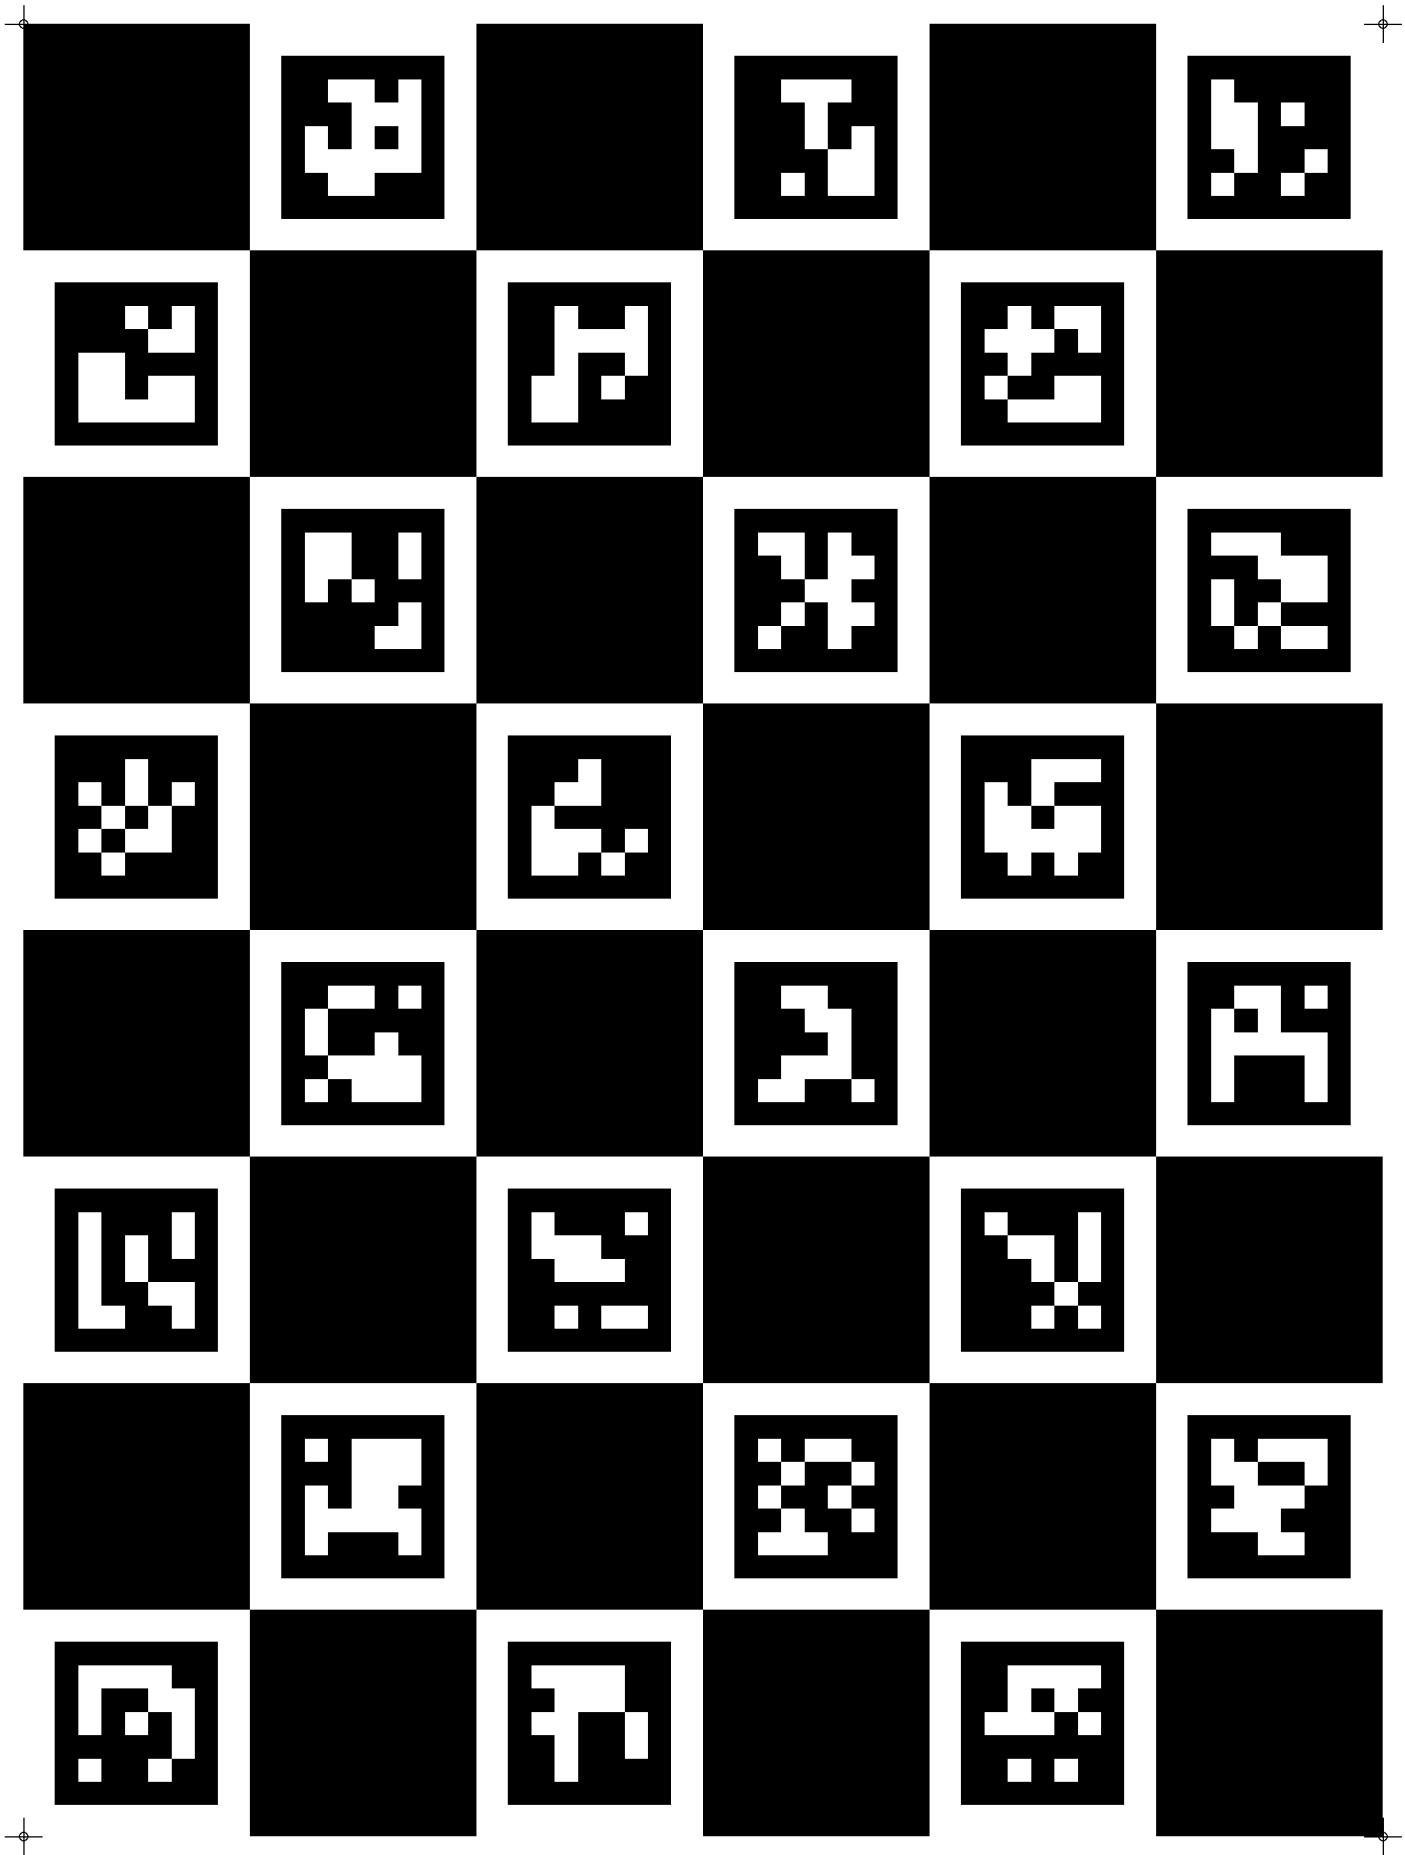

2 VERIFY (print one sheet first)

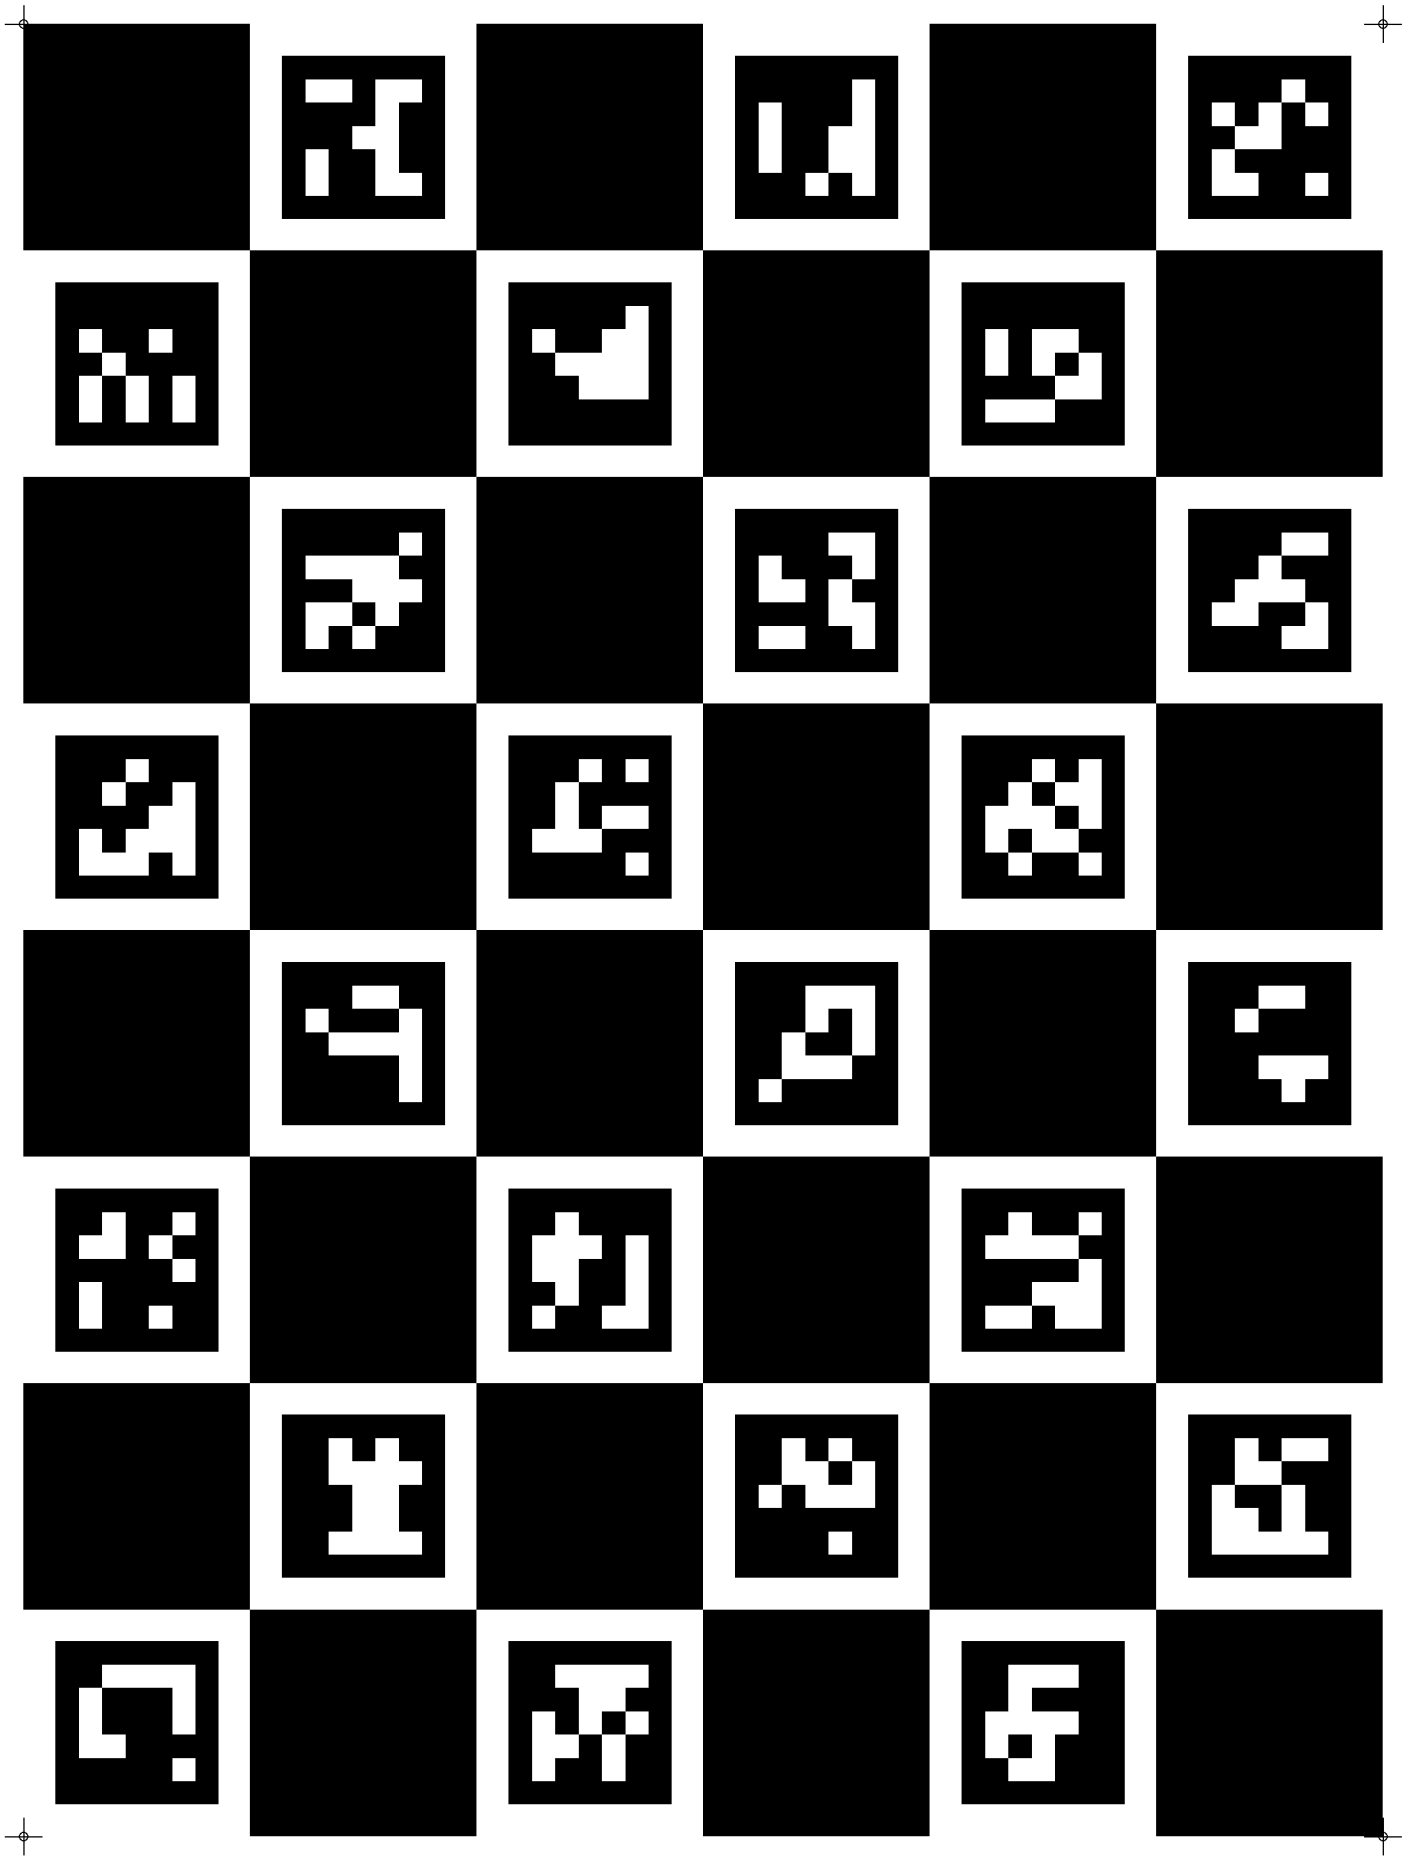

- Measure a printed square: must be exactly 30mm
- If wrong, disable any auto-scaling in the print dialog or driver

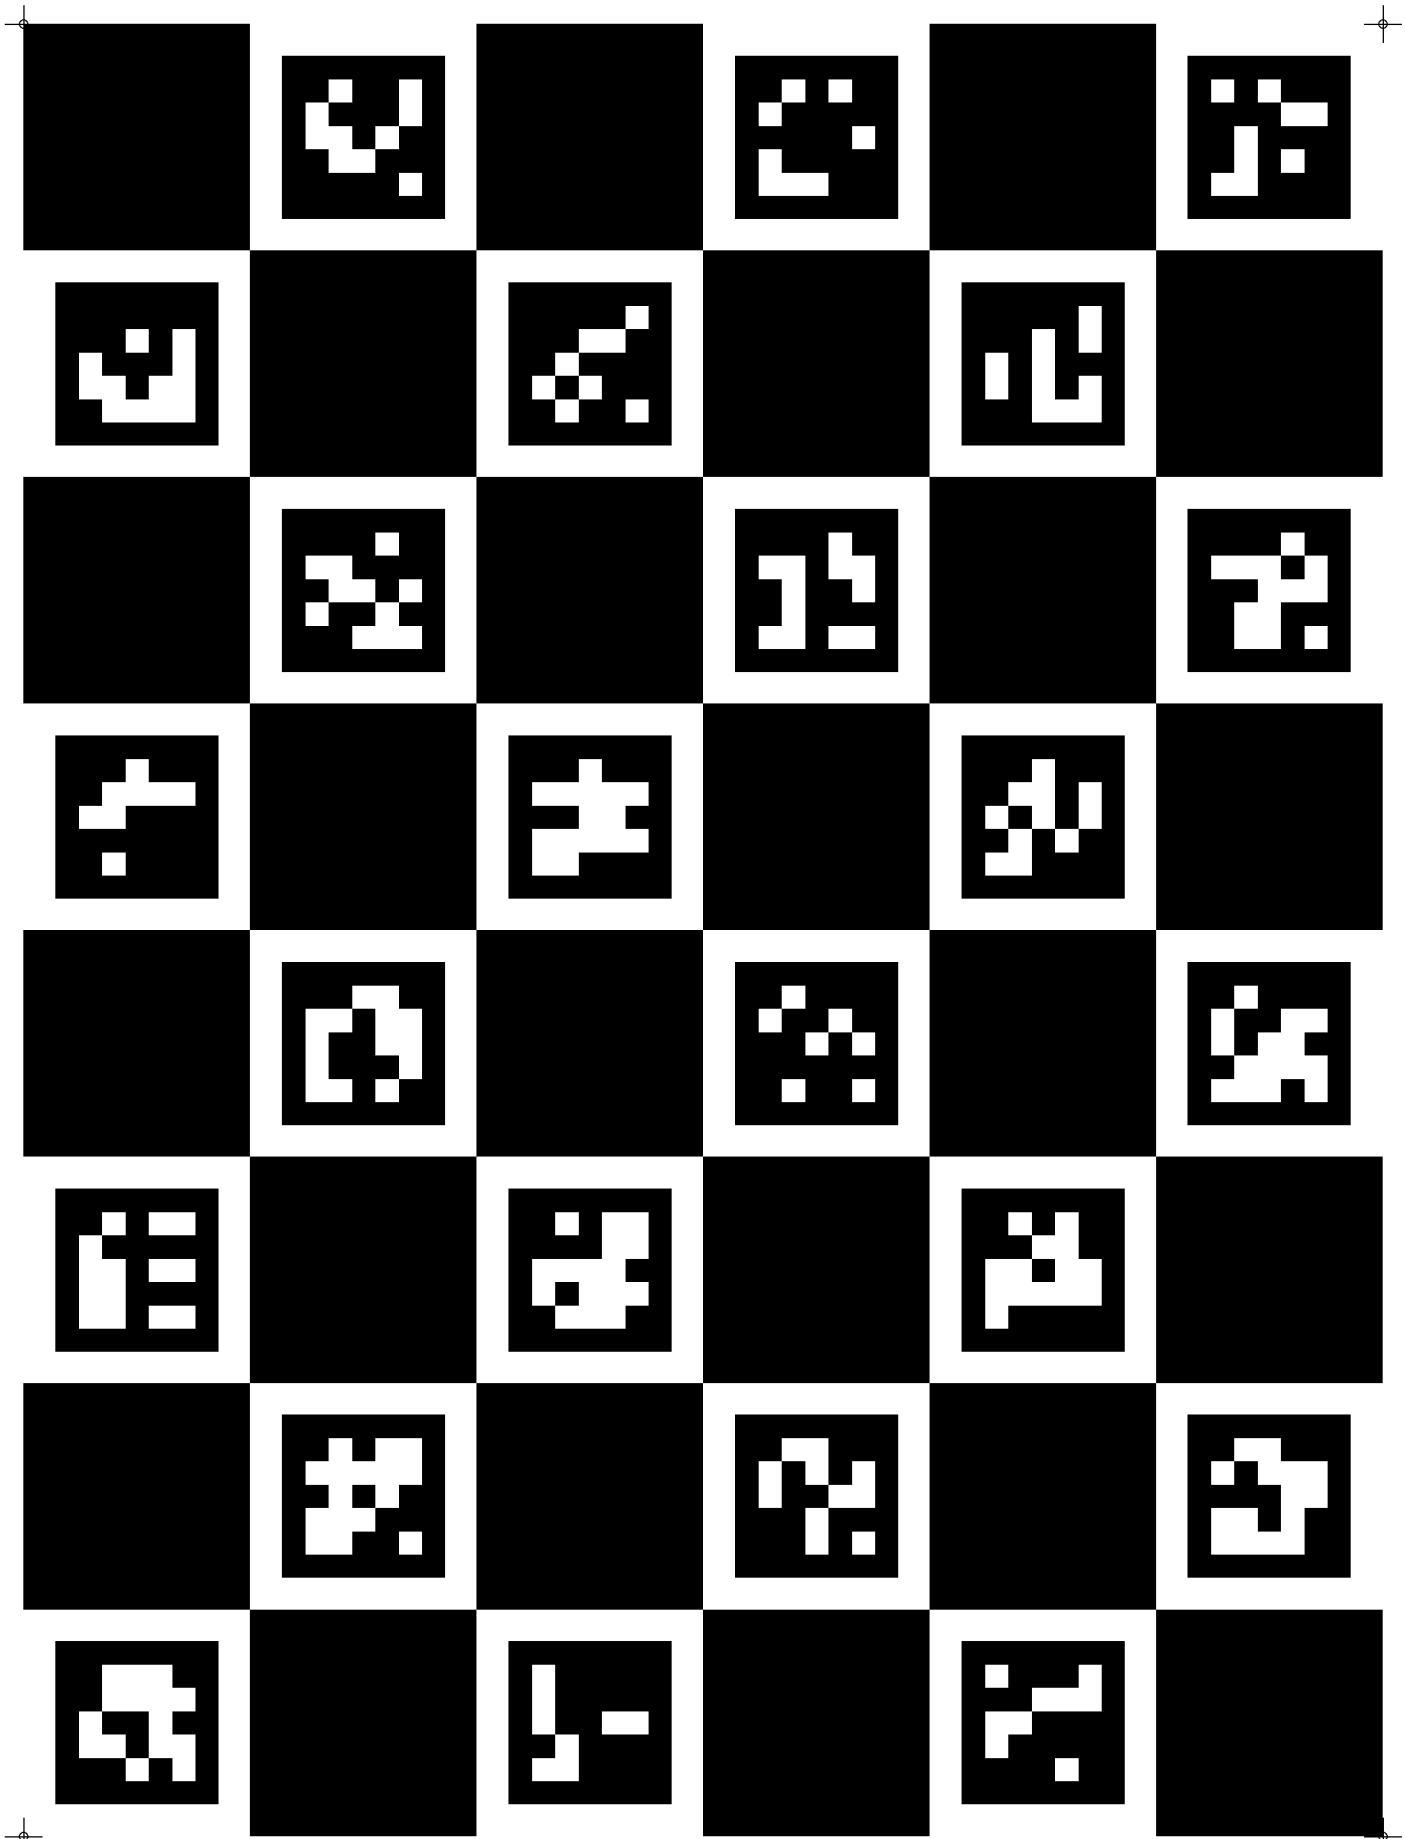

3 ASSEMBLE (any rectangle of pages)
